EDUCATION

BAPTALA ENGINEERING COLLEGE,
BAPATLA 2015 - 2018

- Bachelor's in Electronics and Communication Engineering with 8.17 CGPA

SKILLS

- Linux/ Shell Scripting
- Docker
- Kubernetes
- AWS , GCP
- Python
- Chaos Engineering
- CICD - Jenkins, GoCD
- GitOps - ArgoCD
- Terraform
- Ansible , Chef
- Git
- Hashicorp Vault, Packer

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate (05/2023 - 05/2026)
- Docker Essentials: A Developer Introduction
- Microsoft Azure Fundamentals(AZ-900)

PROFILE

Results driven Site Reliability Engineer and DevOps professional with **7+ years of experience** in designing, migrating, and operating highly available cloud-native platforms. Proven expertise in **AWS, Kubernetes (EKS), CI/CD pipelines, Infrastructure as Code, and GitOps**, with a strong focus on reliability, scalability, cost optimisation, and operational excellence in production environments. Well-versed in **Production support** and **on-call engineering** for cloud-native platforms.

WORK EXPERIENCE

● SS&C EZE Software India Pvt Ltd, Hyderabad

Senior Site Reliability Engineer

2024 Mar - Present

- Played a key role in migrating container platforms from Rancher 1.6 to Amazon EKS, including cluster setup, workload onboarding, **Karpenter-based autoscaling**, **Vault** for secrets management, and **GitOps-driven deployments**.
- Managed **24x7 on-call operations**, responding to system and application alerts, leading incident triage, coordinating bridge calls, and driving timely incident resolution to meet SLAs.
- Partnered with development teams to resolve **CI/CD pipeline** failures, access issues, and environment-related problems, ensuring reliable and continuous delivery.
- Executed **RDS upgrades**, Blue/Green deployments, CA certificate rotations, and MSSQL SSL certificate upgrades with minimal downtime and risk.
- Provisioned and managed cloud infrastructure using **Terraform**, enforcing consistency, scalability, and infrastructure-as-code best practices.
- Drove **cloud cost optimization initiatives**, including migrating RDS workloads to Aurora Serverless, reducing operational costs while maintaining performance and availability.
- Designed and integrated alerting pipelines from **Splunk, Grafana**, and AWS CloudWatch into Slack and PagerDuty for proactive monitoring and faster incident response.
- Developed and maintained **Chef cookbooks** and recipes to automate server provisioning, configuration management, and patching across environments.
- Implemented a **Chaos Engineering** proof of concept using LitmusChaos, executing fault injection scenarios on Kubernetes clusters and AWS EC2 instances to validate system resilience.
- Optimized **AWS CloudWatch costs** by defining log retention policies, removing unused log groups and alarms, achieving a 25% reduction in overall AWS monitoring costs.

ACHIEVEMENTS

- Spot Award for Exploring Vault & Quick start in Systems understanding in EZE
- Awarded with Phenomenal Performer in AWS Practice Area of 2023 from Techolution
- Won the Star of the Month for going an extra mile to resolve the incidents.

LANGUAGES

- English (Fluent)
- Telugu (Native)
- Hindi (Intermediate)

Techolution India Pvt Ltd

DevOps Engineer

2022 Apr - 2024 Mar

- Worked for the SonicDriveIn client, a Restaurant Chain Company based in the US, building the core restaurant technology platform from scratch.
- Managing AWS resources like **EC2, S3 Bucket, EKS,EBS, ELB**, Auto- Scaling Groups, RDS,CloudFront,Certificate Manager,IAM and VPC.
- Performing regular maintenance activities like AMI refresh of Production EC2 instances and Fortiweb WAF upgrades to keep platform up to date and free from vulnerabilities.
- Developing an end to end pipeline to build, test and deploy applications on Kubernetes cluster.
- Configuring Infrastructure using Ansible playbooks.
- Deploying Applications to EKS using **ArgoCD**.
- Created a Complete Infrastructure automation using terraform on **GoCD** CICD leveraging GitOps.
- Monitoring Application performance on Splunk and infrastructure on Prometheus.
- Creating routes & APIs with necessary plugins on Kong API gateway via Kong Dashboard.
- Creating routes & APIs with necessary plugins on Kong API gateway via Kong Dashboard.
- Managing Infrastructure & application secrets using in house tool CLI developed using python2.
- Troubleshoot networking issues in AWS VPC and Linux.
- Monitoring Application performance on Splunk and infrastructure on Prometheus.

Tata Consultancy Services

Systems Engineer

2019 Jan - 2022 Apr

- Responsible for building pipelines by integrating git , Maven, NPM with Jenkins for Java & NodeJs Applications.
- Working on Jenkins to automate deployment of applications & Configurations into development, test and Production Environments.
- Experience in branching, merging, and maintaining the versions using SCM tools like Gitlab.
- Providing access to Gitlab,Jenkins for the developers and stakeholders when requested.
- Working experience with ticketing tools like JIRA, and ServiceNow.
- Creating tag based docker images and maintaining them in the google container registry.
- CentOS / Ubuntu system administration and performance tuning.
- Worked on Trouble Reports created by customers by doing code changes in python, Ansible and shell script and Deploying in through Jenkins.
